Mixed Fractions

by Kathleen Wiley

In fractions, when the numerator's bigger than the denominator
That's a show-stopper
'Cause that's called improper
So just divide that numerator by that little denominator
And with that action
You've made a mixed fraction

Let's say the numerator's 9 and the denominators 5
Well, just divide...that 5 into 9
Well, that goes once but there's 4 left
So now your fraction's one and four fifths
And now that action....has made your mixed fraction
