Seconds, Minutes

by Kathleen Wiley

60 seconds in a minute....

60 minutes in an hour.....

24 hours in a day.....

30 days in a month and sometimes we know 31....

But February we know's 28....

Except on Leap Year February has 29....

Then that year's 366....

But only every 4th year so we don't have to worry....

We'll use that year to play some neat tricks...

We usually have 365 days in one year....

That's the figure we most often use.....

We get that figure from the time it takes our earth to orbit...

Once around the sun.... so here's our news....

We'll make good use of every second, minute and hour....

Day and week and month and year....

So as we face the future our confidence will shine through....

As we know we'll have nothing to fear....
