Similar and Congruent

by Kathleen Wiley

Similar....in *math*....means **the same**....

Similar....in *math*....means the **same shape**....

Bigger....or smaller....or shorter....or taller....

Yes, **similar means the shame shape**....***in math***!!!

But **exactly the same size and shape** is ***congruent***....

When one's on top of the other you can't tell they're two of them....

Congruent shapes are a sight for sore eyes....

'Cause ***congruent shapes means the same shape and the same size***!!!
